Question assigned to the following page: [1](#)

### 3.1 HW

3.1.1 a)  $27 \in A = \text{True}$

because 27 is an integer and multiple of 3.

b)  $27 \in B = \text{False}$

because 27 has no perfect square.  $x = y^2$   $27 = y^2$   
 $y = \sqrt{27}$

c)  $100 \in B = \text{True}$

because 100 has a perfect square.  $100 = y^2$   $y = \sqrt{100}$   
 $y = \pm 10$

d)  $E \subseteq C$  or  $C \subseteq E = \text{False}$

because neither are a subset of each other.

e)  $E \subseteq A = \text{True}$

because  $\{3, 6, 9\}$  are all multiples of three.

f)  $A \subseteq E = \text{False}$

because  $E$  can be a perfect subset of  $A$  but not the other way around.

g)  $E \in A = \text{False}$

because  $E$  is a set and not an element.

Question assigned to the following page: [2](#)

### 3.2 HW

- 3.2.1
- a)  $2 \in X \rightarrow \text{True}$
  - b)  $\{2\} \subseteq X \rightarrow \text{True}$
  - c)  $\{2\} \in X \rightarrow \text{False}$
  - d)  $3 \in X \rightarrow \text{False}$
  - e)  $\{1, 2\} \in X \rightarrow \text{True}$
  - f)  $\{1, 2\} \subseteq X \rightarrow \text{True}$
  - g)  $\{2, 4\} \subseteq X \rightarrow \text{True}$
  - h)  $\{2, 4\} \in X \rightarrow \text{False}$
  - i)  $\{2, 3\} \subseteq X \rightarrow \text{False}$
  - j)  $\{2, 3\} \in X \rightarrow \text{False}$
  - k)  $|X| = 7 \rightarrow \text{False}$

- 3.2.2 a)  $\{a\}$

$$P(\{a\}) = \{\emptyset, \{a\}\}$$

- b)  $\{1, 2\}$

$$P(\{1, 2\}) = \{\emptyset, \{1\}, \{2\}, \{1, 2\}\}$$

Question assigned to the following page: [3](#)

### 3.3 HW

3.3.3 a)  $\bigcap_{i=2}^5 A_i = A_2 \cap A_3 \cap A_4 \cap A_5$

$$= \{i^0, i^1, i^2\}$$

$$= \{2^0, 2^1, 2^2\} \cap \{3^0, 3^1, 3^2\} \cap \{4^0, 4^1, 4^2\} \cap \{5^0, 5^1, 5^2\}$$

$$= \{1, 2, 4\} \cap \{1, 3, 9\} \cap \{1, 4, 16\} \cap \{1, 5, 25\}$$

$$= \{1\}$$

b)  $\bigcup_{i=2}^5 A_i = A_2 \cup A_3 \cup A_4 \cup A_5$

$$= \{i^0, i^1, i^2\}$$

$$= \{2^0, 2^1, 2^2\} \cup \{3^0, 3^1, 3^2\} \cup \{4^0, 4^1, 4^2\} \cup \{5^0, 5^1, 5^2\}$$

$$= \{1, 2, 4\} \cup \{1, 3, 9\} \cup \{1, 4, 16\} \cup \{1, 5, 25\}$$

$$= \{1, 2, 4, 3, 9, 16, 5, 25\}$$

c)  $\bigcap_{i=1}^{100} B_i$

$$= \{x \in \mathbb{R} : -1 \leq x \leq 1/100\}$$

d)  $\bigcup_{i=1}^{100} B_i$

$$= \{x \in \mathbb{R} : -100 \leq x \leq 1\}$$

e)  $\bigcap_{i=1}^{100} C_i$

$$\bigcap_{i=1}^{100} C_i = \{x \in \mathbb{R} : -\frac{1}{i} \leq x \leq \frac{1}{i}\} = \left[-\frac{1}{1}, \frac{1}{1}\right]$$

$$= \left[-\frac{1}{100}, \frac{1}{100}\right] \cap \left[-\frac{1}{99}, \frac{1}{99}\right] \cap \left[-\frac{1}{98}, \frac{1}{98}\right] \cap \dots \cap \left[-1, 1\right]$$

$$\bigcap_{i=1}^{100} C_i = \left[-\frac{1}{100}, \frac{1}{100}\right]$$

Questions assigned to the following page: [3](#) and [4](#)

3.3.3 f)  $\bigcup_{i=1}^{100} L_i \quad L_i = \{x \in \mathbb{R} : -\frac{1}{i} \leq x \leq \frac{1}{i}\}$

$$\bigcup_{i=1}^{100} L_i = \{x \in \mathbb{R} : -\frac{1}{100} \leq x \leq \frac{1}{100}\}$$

$$\bigcup_{i=1}^{100} L_i = \{x \in \mathbb{R} : -1 \leq x \leq 1\}$$

3.4.4 a)  $|A \cap B| = 1 \rightarrow \underline{\text{False}}$

b)  $\{1, 2\} \subset P(A) \rightarrow \underline{\text{True}}$

c)  $G \leq H \rightarrow \underline{\text{False}}$

d)  $|C - F| = 1 \rightarrow \underline{\text{False}}$

e)  $A \cup B = A \oplus B \rightarrow \underline{\text{True}}$

f)  $1 \in A \cap B \cap C \rightarrow \underline{\text{False}}$

g)  $\emptyset \in C \rightarrow \underline{\text{False}}$

h)  $\{2, 3\} \subseteq P(C) \rightarrow \underline{\text{True}}$

i)  $C \cap F = C \cap G \rightarrow \underline{\text{True}}$

j)  $E \cup F \subseteq \mathbb{R} \rightarrow \underline{\text{True}}$

k)  $\emptyset \in P(B) \rightarrow \underline{\text{True}}$

Question assigned to the following page: [5](#)

### 3.5. HW

3.5.1

a)  $(B \cap C) \cup \overline{B \cap C} = U \rightarrow \text{Complement Law}$

b)  $\overline{A \cup (A \cap B)} = \bar{A} \rightarrow \text{Absorption Law}$

c)  $A \cup (\overline{B \cap C}) = A \cup (\bar{B} \cup \bar{C}) \rightarrow \text{De Morgan's Law}$

d)  $(B \cap \bar{C}) = B \cap C \rightarrow$

e)  $(B - A) \cup (B - A) = (B - A) \rightarrow \text{Idempotent}$

f)  $((A \oplus B) - C) \cap \emptyset = \emptyset \rightarrow \text{Domination Law}$

3.5.2

a)  $(\bar{A} \cap C) \cup (A \cap C) = C$

$= \{(\bar{A} \cap C) \cup A\} \cap \{(\bar{A} \cap C) \cup C\}$  distribution law

$= \{ (A \cup A) \cap (C \cup A) \} \cap \{ (\bar{A} \cup C) \cap (C \cup C) \}$  Identity law

$= \{ 1 \cap (C \cup A) \} \cap \{ (\bar{A} \cup C) \cap C \}$  Idempotent law

$= \{ (C \cup A) \cap C \}$  Absorption law

$\equiv C$

Question assigned to the following page: [5](#)

3.5.2

$$b) (B \cup A) \cap (\bar{B} \cup \bar{A}) = A$$

$$= (B \cap \bar{B}) \cup A \quad \text{distributive law}$$

$$= \emptyset \cup A \quad \text{complement law}$$

$$= A \quad \text{Identity law}$$

$$c) \overline{A \cap \bar{B}} = \bar{A} \cup B$$

$$\text{LHS} \uparrow = \bar{\bar{B} \cup A} \quad \text{De Morgan's Law}$$

$$= \bar{B} \cup \bar{A} \quad \text{Commutative law}$$

$$= \bar{A} \cup B$$

$$d) \bar{A} \cap (A \cup B) = \bar{A} \cap B$$

$$= (\bar{A} \cap A) \cup (\bar{A} \cap B) \quad \text{distributive law}$$

$$= \emptyset \cup (\bar{A} \cap B) \quad \text{complement law}$$

$$= \bar{A} \cap B \quad \text{Identity law}$$

$$e) \bar{A} \cup (A \cap B) = \bar{A} \cup B$$

$$\text{LHS} \uparrow = (\bar{A} \cup A) \cap (\bar{A} \cup B) \quad \text{distributive law}$$

$$= U \cap (\bar{A} \cup B) \quad \text{complement law}$$

$$= \bar{A} \cup B \quad \text{identity law}$$

$$f) A \cap (B \cap \bar{B}) = \emptyset$$

$$(B \cap \bar{B}) = \emptyset$$

$$= A \cap \emptyset \quad \text{Complement law}$$

$$= A \quad \text{domination law}$$

Questions assigned to the following page: [5](#) and [6](#)

3.5.2 g)  $A \cup (B \cap \bar{B}) = U$

$A \cup (U) =$  complement law

$U =$  domination law

$U = U$

$A \cup \bar{A} = U$

$A \cup U = U$

3.7.1 a) No, the sets  $A, B, C$  do not form a partition with  $D$ .

b) No, the sets  $B$  and  $C$  do not form a partition of  $D$ .

c) yes, the sets  $B$  and  $C$  form a partition of set  $E$

Question assigned to the following page: [7](#)

### 3.8 HW

3.8.4 let  $B = \{0, 1\}$ ,  $f: B \times B \rightarrow B \times B$  as  $f(x, y) = (1-y, 1-x)$

a)  $B \times B = \{(0, 0), (0, 1), (1, 0), (1, 1)\}$

Domain:  $\{(0, 0), (0, 1), (1, 0), (1, 1)\}$

c) Range:  $\{(0, 0), (0, 1), (1, 0), (1, 1)\}$

Question assigned to the following page: [8](#)

### 3.10 HW

3.10.2 a)  $f: \mathbb{R} \rightarrow \mathbb{R}, f(x) = x^2$

- when  $f(1) = 1^2$  and  $f(-1) = (-1)^2$   
 $= 1$  and  $= 1$

2 different elements of  $x$  map to 2 different elements of  $y$ . Hence it's not one-to-one  
 - when  $-1 \in \mathbb{R}$  there doesn't exist any  $x \in \mathbb{R}$  such that  $f(x) = x^2 = -1$ . Such that  $f$  is not onto.

Neither

b)  $g: \mathbb{R} \rightarrow \mathbb{R}, g(x) = x^3$

let  $x_1, x_2 \in \mathbb{R}$  such that  $g(x_1) = g(x_2)$   
 $= x_1^3 = x_2^3$   
 $= (x_1 - x_2)(x_1^2 + x_1x_2 + x_2^2) = 0$   
 $= x_1 = x_2$

$g$  is one-to-one. Now for every  $y \in \mathbb{R}, \exists x \in \mathbb{R}$  such that  $g(x) = y$ , so  $g$  is also onto.

Both one-to-one and onto

c)  $h: \mathbb{Z} \rightarrow \mathbb{Z}, h(x) = x^3$

let  $x_1, x_2 \in \mathbb{R}$  such that  $h(x_1) = h(x_2)$   
 $= x_1^3 = x_2^3$   
 $= (x_1 - x_2)(x_1^2 + x_1x_2 + x_2^2) = 0$   
 $= x_1 = x_2$

$h$  is one-to-one. Now let  $y \in \mathbb{Z}$  such that there does not exist any  $x \in \mathbb{Z}$  that  $h(x) = y$ . Thus  $h$  is not onto.

$h$  is one-to-one, but not onto.

Question assigned to the following page: [8](#)

3.10.2 d)  $f: \mathbb{Z} \rightarrow \mathbb{Z}, f(x) = \left\lfloor \frac{x}{5} \right\rfloor - 4$

Let  $1, 2 \in \mathbb{Z}$  such that

$$f(1) = \left\lfloor \frac{1}{5} \right\rfloor - 4 = 0 - 4 = -4 \quad f(2) = \left\lfloor \frac{2}{5} \right\rfloor - 4 = 0 - 4 = -4$$

$$f(1) = -4$$

$$f(2) = -4$$

Since  $x_1 \neq x_2$  and  $f(1) = f(2)$  then the function  $f$  is not one-to-one. For any integer  $[Z] = 2$  so the function is onto

$f$  is not one-to-one but is onto

e)  $f: \mathbb{Z} \rightarrow \mathbb{Z}, f(x) = 5x - 4$

let  $x_1, x_2 \in \mathbb{Z} \quad f(x_1) = f(x_2)$   
 $5(x_1) - 4 = 5(x_2) - 4$   
 $5(x_1) = 5(x_2)$

$$x_1 = x_2$$

$f$  is one-to-one. Now let  $f(x) = 3$

$$5x - 4 = 3$$

$$5x = 7 \quad x = \frac{7}{5} \notin \mathbb{Z}$$

$$f(x) = 3 = \frac{7}{5} \notin \mathbb{Z}$$

$f$  is one-to-one, but is not onto

f)  $f: \mathbb{Z} \rightarrow \mathbb{Z}, f(x) = x - 4$

let  $x_1, x_2 \in \mathbb{Z}$

$$f(x_1) = (x_1) - 4 \quad x_1 = x_2$$

$$f(x_2) = (x_2) - 4$$

$f$  is one-to-one. Now let  $f(x) = y$  &  $x = f^{-1}(y)$

$$y = x - 4 \quad x = x + 4$$

$$x = f^{-1}(y) = y + 4 = f^{-1}(y)$$

$$f^{-1}(x) = x + 4$$

$f$  is both one-to-one and onto

Question assigned to the following page: [9](#)

### 3.11 HW

3.11.2 a)  $f(x) = x+3$   $f(y) = y+3$

$x=y$  such that  $f$  is one-to-one and therefore has a well defined inverse.

When  $f(x) = x+3 = y$ , then  $x = y-3$ ,  
 $f^{-1}(y) = y-3$  is the inverse.

b)  $x, y \in \mathbb{Z}$ ,  $f(x) = f(y) \rightarrow 2x+3 = 2y+3$

$x=y$  such that  $f$  is one-to-one.

When  $f(x) = 2x+3 = y$ , then  $x = \frac{y-3}{2}$ ,

$f(y) = \frac{y-3}{2}$

$f(2) = \frac{2-3}{2} = -\frac{1}{2}$

$f(2) = -\frac{1}{2} \notin \mathbb{Z}$  and therefore the inverse is not well defined.

c)  $x, y \in \mathbb{Z}$ ,  $f(x) = f(y) \rightarrow 2x+3 = 2y+3$

$x=y$  so that  $f$  is one-to-one.

When  $f(x) = 2x+3 = y$ , then  $x = \frac{y-3}{2}$ , such that

$f^{-1}(y) = \frac{y-3}{2}$  is the inverse and is well defined.

d) The function is not one-to-one, since there are different subsets of  $A$  having the same cardinality.

$C = \{1, 2, 3, 4\}$ ,  $D = \{2, 3, 4, 5\}$

$|C| = 4$ ,  $|D| = 4$

$C=D$  such that  $f$  is not one-to-one and does not have a well defined inverse.

e)  $x \in A$ ,  $f(x) = \bar{x}$  where  $A = \{1, 2, 3, 4, 5, 6, 7, 8\}$

since  $\bar{x} = \bar{y}$  which is also  $x=y$  the inverse is well defined.

$C = \{1, 2, 3, 4\}$ ,  $D = \{2, 3, 4, 5\}$

$f(C) = \bar{C} = \{5, 6, 7, 8\}$

$f(D) = \bar{D} = \{1, 6, 7, 8\}$  Well defined.

f) Since different sequences can be mapped to the same sequence as with  $f(001) = 101$ ,  $f(101) = 101$

Meaning the inverse function can not be well defined.

Question assigned to the following page: [10](#)

3.12 HW

3.12 a) Range of  $g = \{2, 3\}$

b) Domain of  $h \circ g = \{a, b, c\}$

c)  $h^{-1}(y) = 3$

d) domain of  $h^{-1} \circ h = \{1, 2, 3, 4\}$

e)  $(h \circ g)(b)$   
 $= h(g(b))$   
 $= h(2)$   
 $= w$

f)  $g$  is neither one-to-one or onto

g)  $h$  is a bijection, but  $g$  is not a bijection.
